

Near two-fold rise in ICD-coded sepsis-related hospital admissions in Australia: An AIHW database analysis (2011-16)

Ashwani Kumar, MD

Research Associate, Critical Care Division, The George Institute for Global Health

Short Bio

Current employment

- Research Associate at the Critical Care Division of the George Institute for Global Health (TGI)
- Pursuing PhD in the area of estimating true sepsis disease burden using ICD-coding
- Digital health consultant/entrepreneur.

Background - Sepsis

- A life-threatening organ dysfunction caused by a dysregulated host response to infection.
- Disease burden:
 - Approx. 30 million episodes and six million deaths per year globally
 - In US, cost of treating sepsis in ICU is \$24 billion USD
- In the absence of a definitive diagnostic test, clinical diagnosis is the mainstay to identify sepsis cases
- Use of administrative data, International Classification of Disease (ICD) coding remains the only practical means to estimate the sepsis disease burden

Background

- The disease burden of sepsis remains poorly understood globally, including Australia
- In 2017, the WHO recognised sepsis as a global health priority and urged improved use of ICD coding to estimate the national and global burden of sepsis.
- AIHW (Australian Institute of Health and Welfare)
 - A leading health and welfare statistics agency in Australia
 - Maintains various aggregated and episode-level hospital admission datasets fed by each state
- Trained professional medical coders base the discharge codes on a full review of the medical record and specific coding criteria for each diagnosis.

Objective

To estimate the incidence and trends of sepsis-related hospital admissions (hospitalisations) in Australia during 2011-16 using ICD-10 sepsis codes.

Methods

- **Study design:** A retrospective analysis
- **Database:** Publically available aggregated hospital admission data available at AIHW
- **Study population:** All sepsis-related hospitalisations (both public and private) in Australia between 01 July 2011 and 30 June 2016.
- A descriptive analysis of the incidence and trends of sepsis-related hospitalisation was done

Methods – Case identification

- Sepsis-related hospitalisations were identified using following sepsis ICD-10 codes (Explicit criteria):
 - A02.1 Salmonella sepsis
 - A20.7 Sepsis due to plague
 - A21.7 Sepsis due to tularemia
 - A22.7 Sepsis due to anthrax
 - A24.1 Sepsis due to melioidosis
 - A26.7 Sepsis due to erysipelothrix
 - A28.2 Sepsis due to extraintestinal yersiniosis
 - A32.7 Sepsis due to listeria monocytogenes
 - A39.4 Sepsis due to meningococcal infection
 - A40 Streptococcal sepsis
 - A41.0 – 2.0 Sepsis due to staph
 - A41.5 Sepsis due to other and unspecified Gram-negative organisms
 - A41.8 Other specified sepsis
 - A41.9 Sepsis, unspecified
 - A42.7 Sepsis due to actinomyces
 - A54.86 Sepsis due to gonococcal infection
 - B00.7 Sepsis due to herpesvirus
 - B37.7 Sepsis due to candidal infection
 - R65.2 Severe sepsis

Results

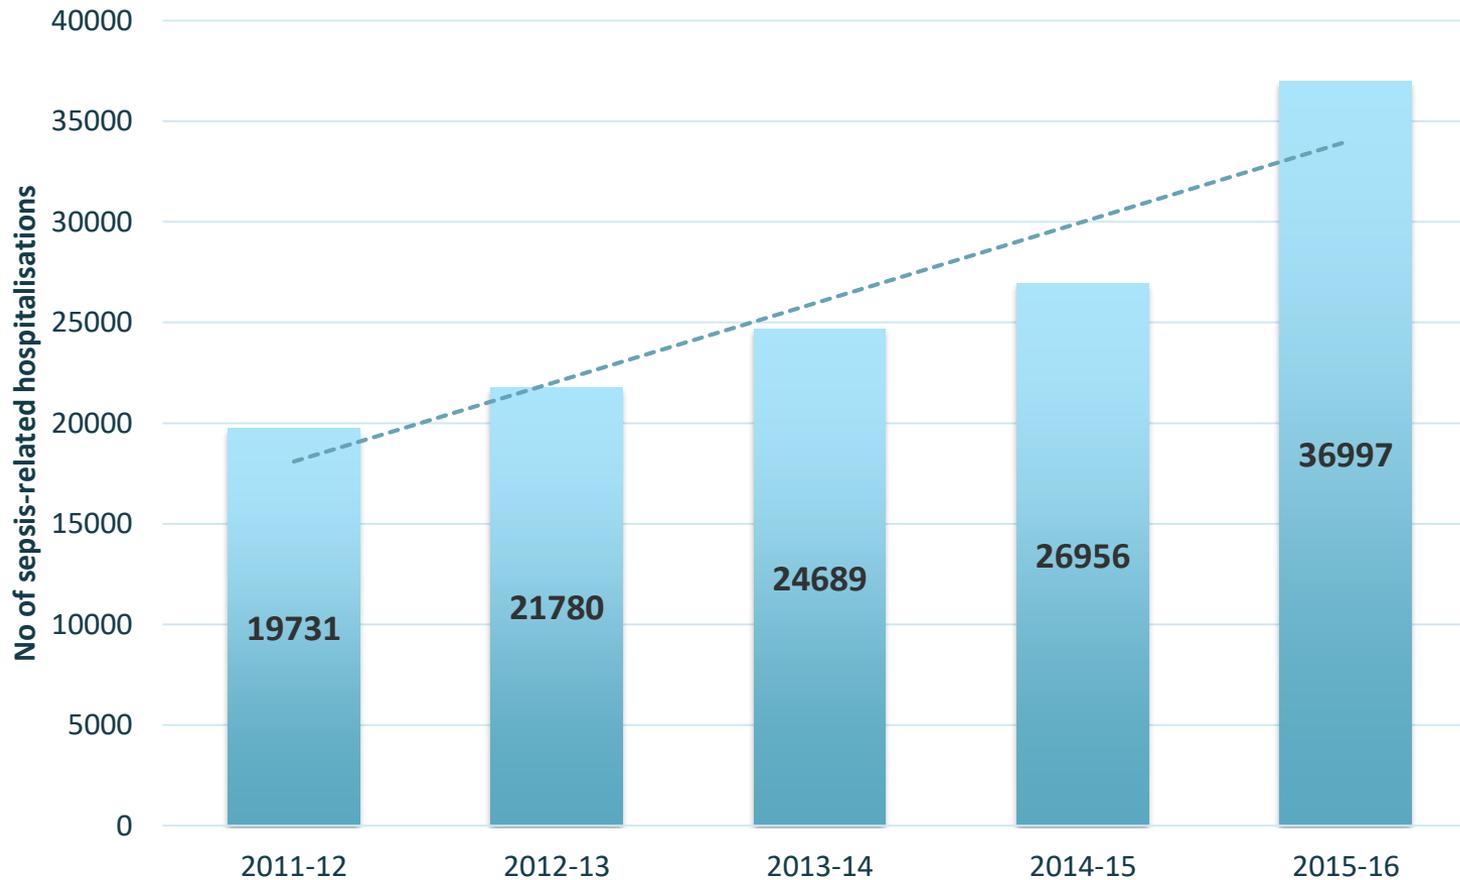

Key Results

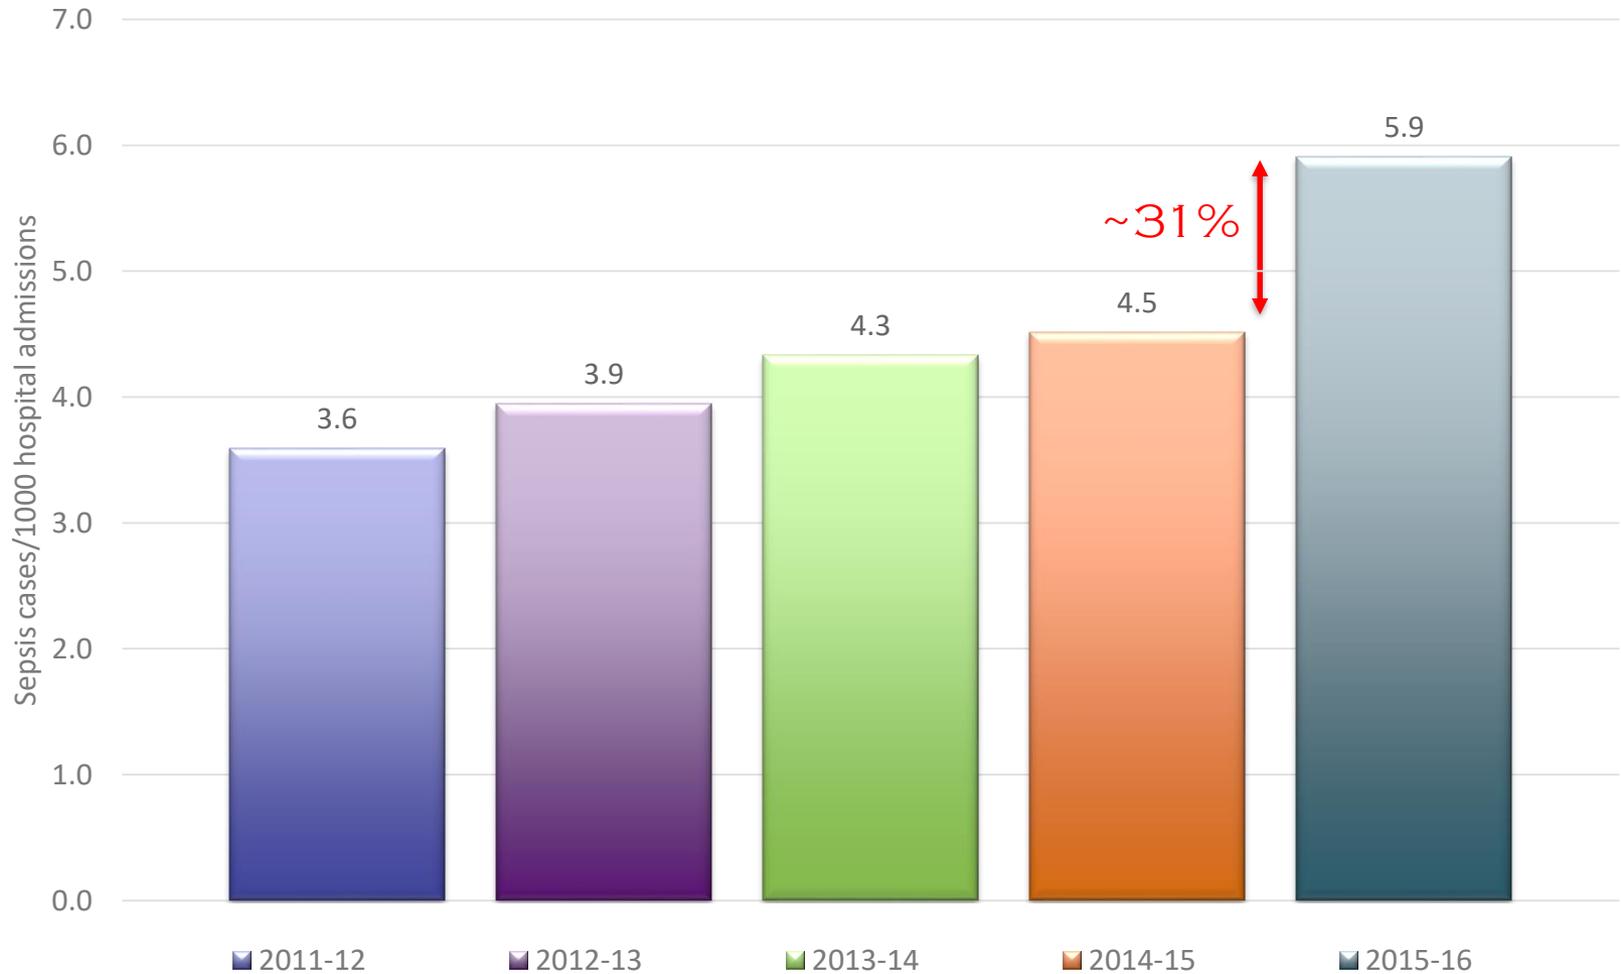

- Out of 28,950,371 hospital admissions, 130,157 (4.5/1000 hospitalisations) had one of the sepsis ICD code.
- An upward trend in sepsis-related hospitalisations was observed
- Non-specific sepsis accounted for about half of the sepsis-related hospitalisations

An upward trend in sepsis-related hospitalisations

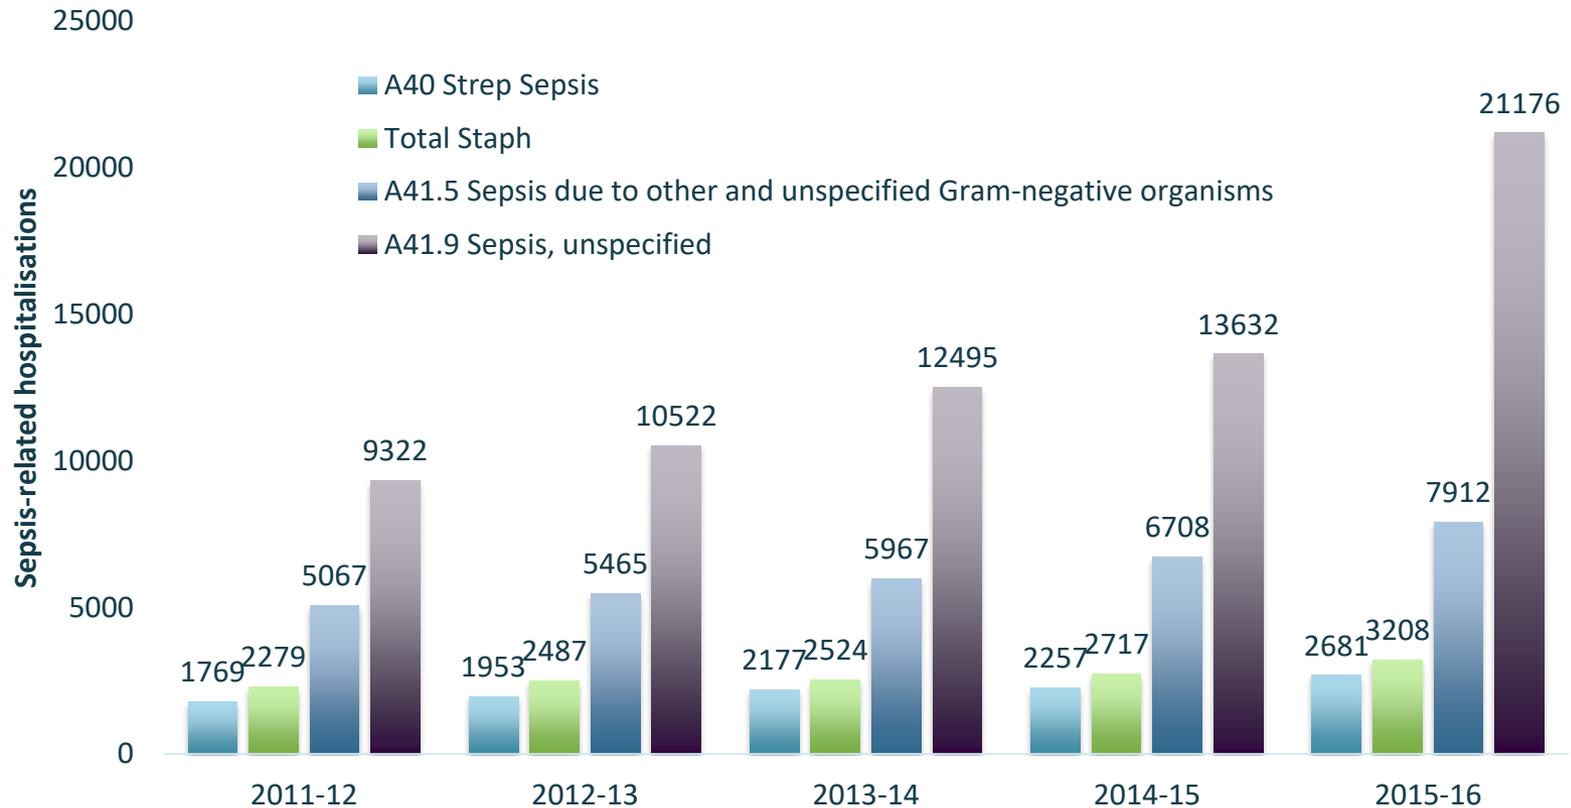

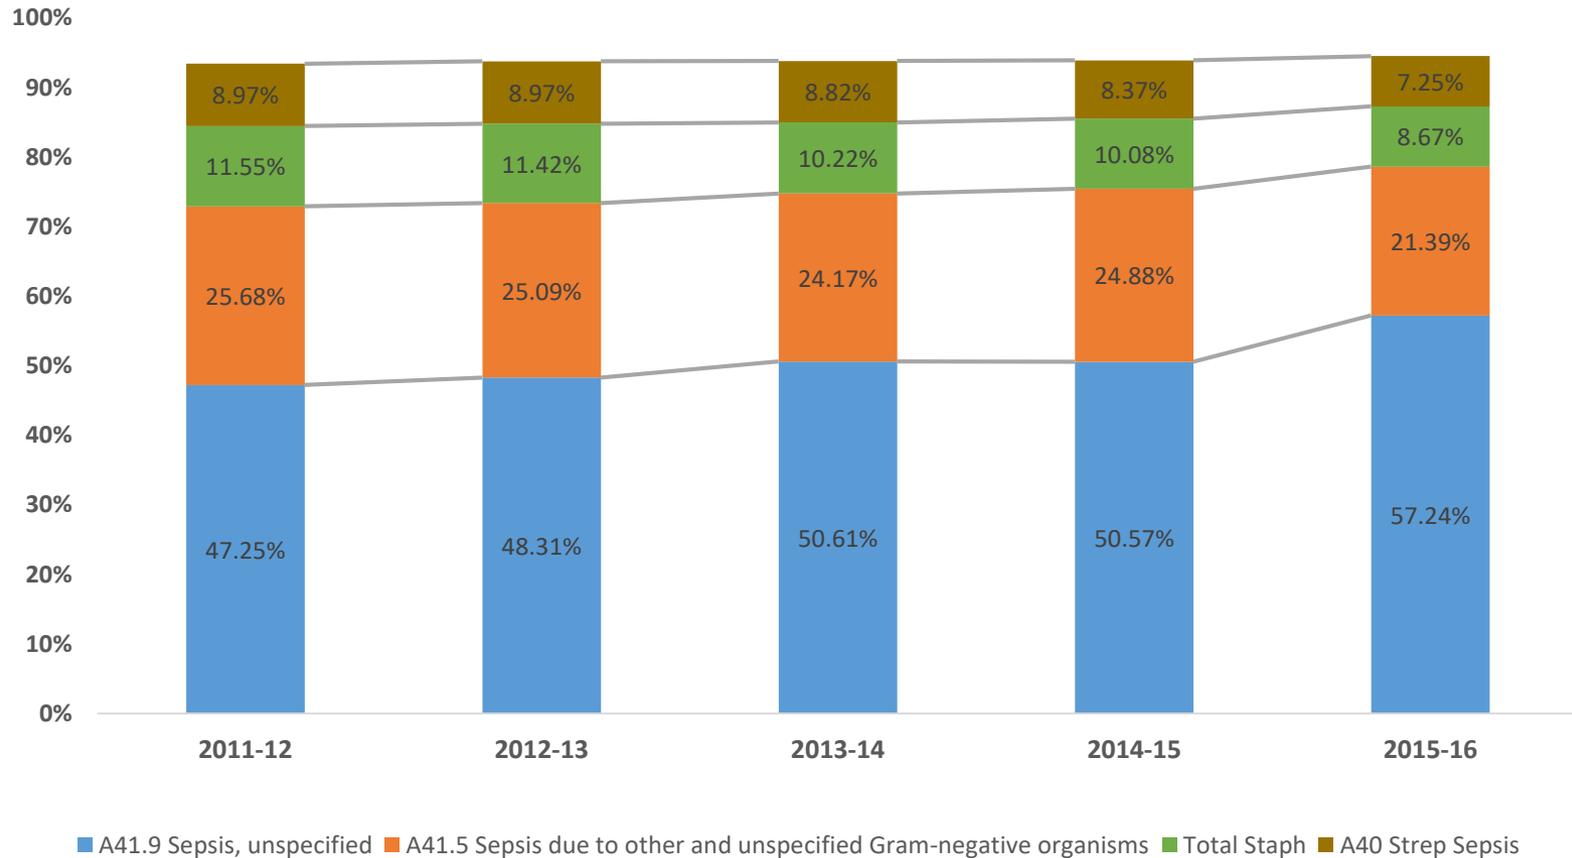

Incidence of sepsis-related hospitalisation

Trends of major sepsis-specific ICD codes

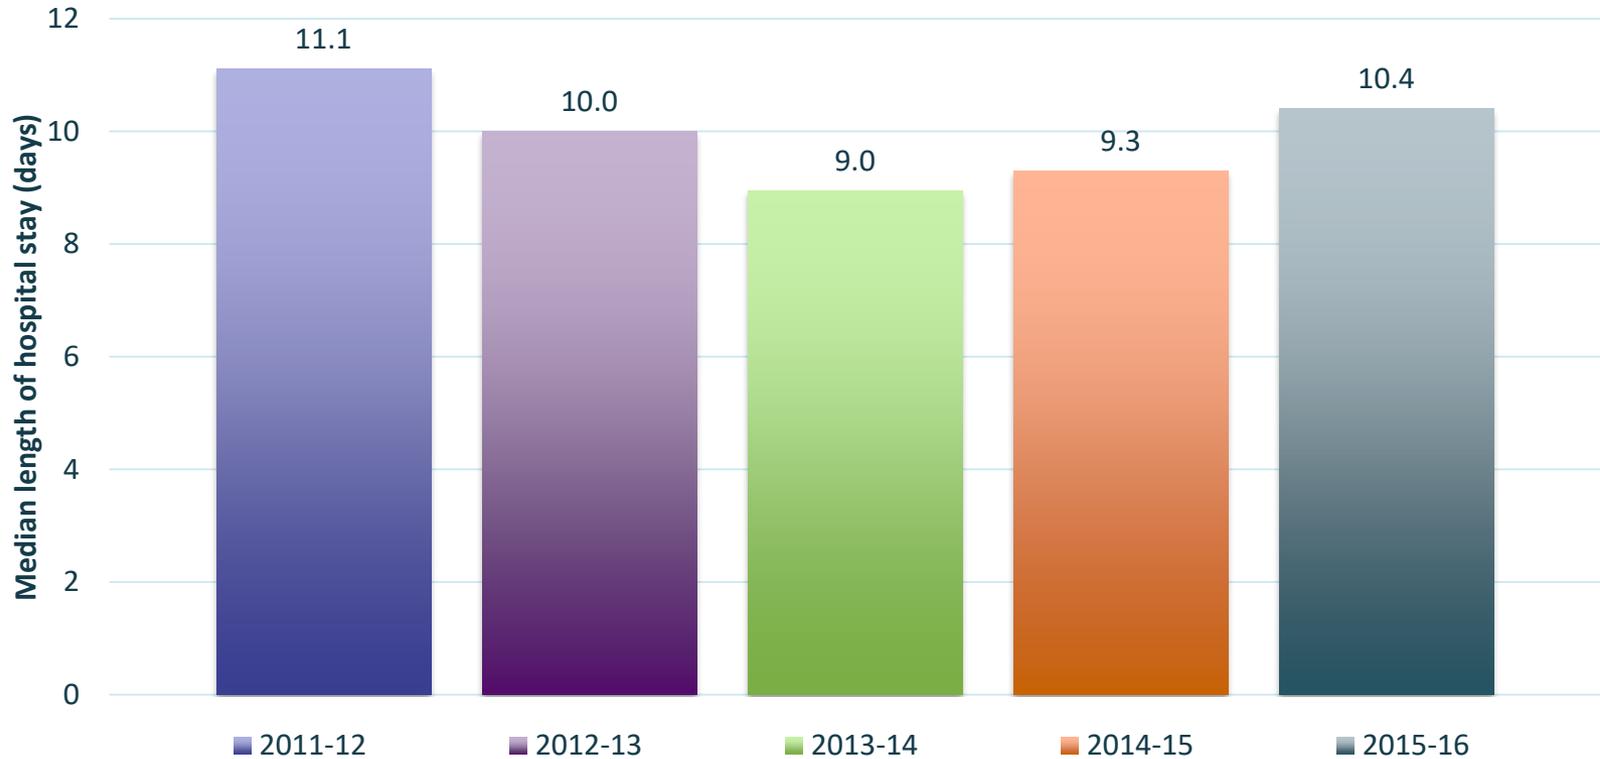

Trends of major sepsis-specific ICD codes

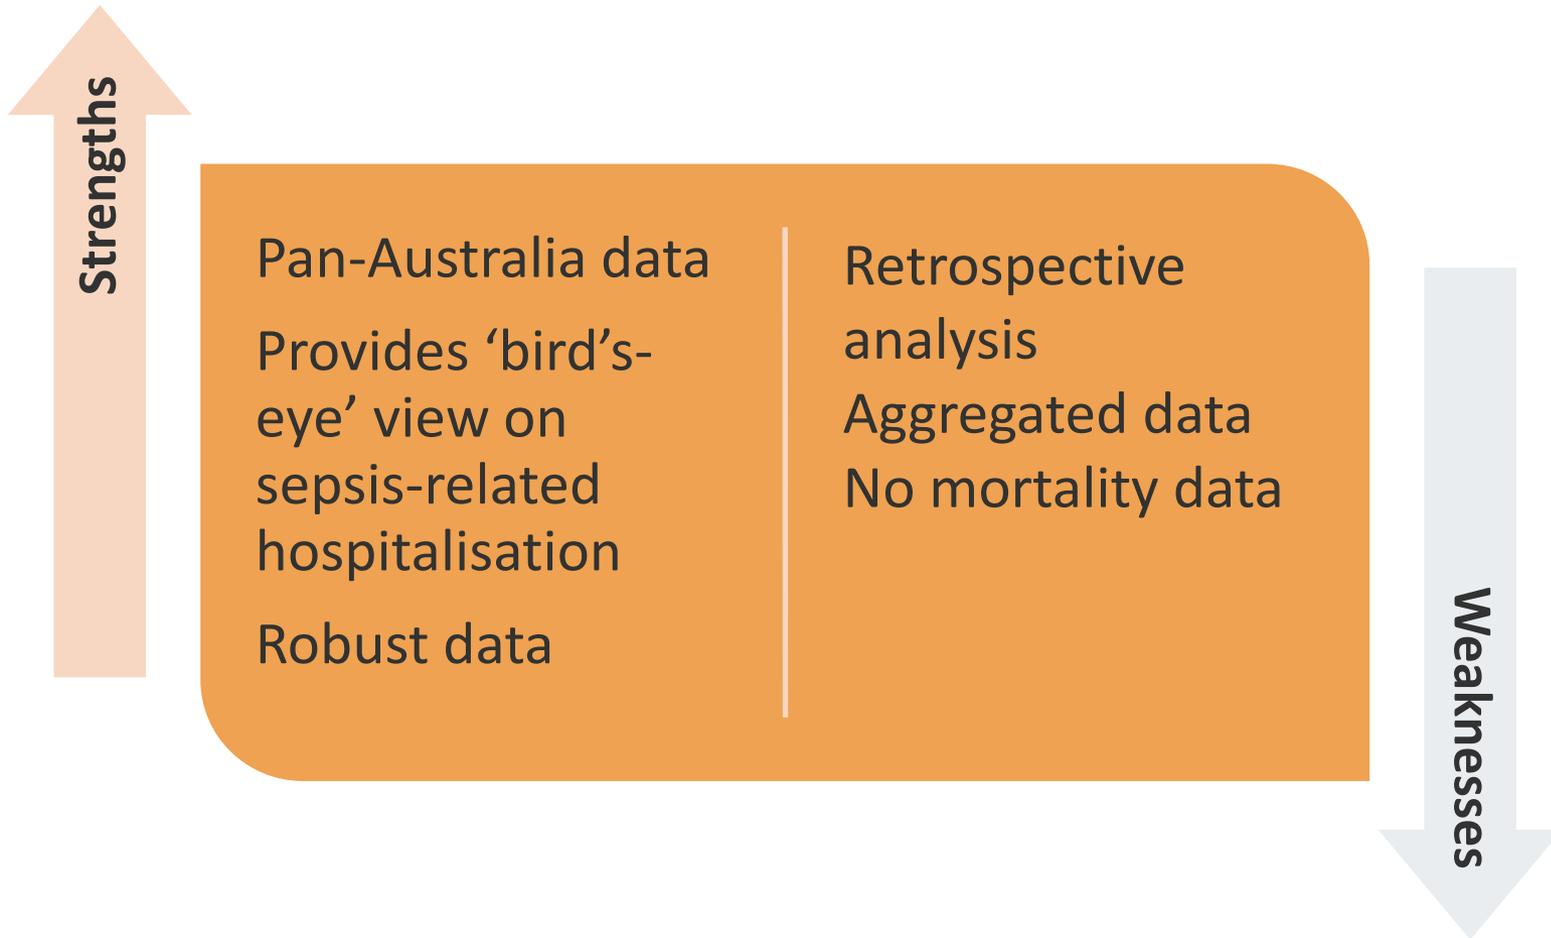

Length of hospital stay

Critical Appraisal

Conclusion

- An upward trend was noticed in sepsis-related hospitalisations during 2011-2016 in Australia
- Driven predominantly by ~20% increase in the proportion of unspecified sepsis-related hospitalisation
- Average length of hospital stay due to sepsis was ~10 days

Future direction

- A request to access episode-level data will be made to AIHW
- Further analysis as per clinically relevant parameters. e.g. duration of mechanical ventilation, ICU admission, mortality etc. will be done
- Duration will be extended to 10 years duration from 2007-17

Thank you
